The True Cost Accounting (TCA) Inventory is a collection of evaluation frameworks, resources, databases, case studies, approaches, and additional information useful for researchers, civil society organizations, policymakers, farmers, and the private sector when conducting a TCA or TEEBAgriFood assessment in the field of agriculture and food systems. Collection of these resources is ongoing.

TCA allows users to comprehensively evaluate the externalities of an eco-agri-food system, moving beyond the traditional measurements of economic key performance indicators (KPIs). By making the real costs and benefits of production and consumption transparent to society, governments, and businesses, TCA becomes an instrument to transform our current eco-agri-food system into a more sustainable one.

For more information on how to conduct a TEEBAgriFood assessment, download the [TEEBAgriFood Overarching Implementation Guidance](#).

The work was commissioned by the Global Alliance for the Future of Food and conducted by Soil & More Impacts and TMG Think Tank for Sustainability. Soil & More Impacts uses agronomic expertise and impact assessment to create resilient food and agricultural supply networks. TMG Think Tank for Sustainability works to empower sustainability transformations by building bridges between different knowledge holders and connecting various communities of practice.
